

completely into the direction of the free-market system and left behind the positive aspects of her cultural identity. Other characters play other aspects of border theory out in other directions.

In this novel we see Fuentes's embryonic interest in the Mexican immigrant. This concern is a product of three determinants: his personal experience as a foreigner, a continuation of the literary discourse with reference to Mexican identity and the necessity of capturing a mushrooming social phenomenon that would continue to grow throughout the rest of his career. It is no wonder that his later novels and essays are a reflection of this growing trend. What is interesting is that, as his literary representation of the Mexican immigrant grew, so did their diversity in his work. Gabriel is just a representation of the working-class immigrant (and a meager one at that). He shows up in the novel just long enough to sing the praises of the United States, throw money around back home, criticize Mexico and die. Later Fuentes's fictional oeuvre would provide a more spherical representation of all strata of Mexicans as border crossers and these representations would question the influence the two cultures have upon one another.
